

National Instrument 43-101 Disclosure

National Instrument 43-101 - Standards of Disclosure for Mineral Projects is a rule developed by the Canadian Securities Administrators, and applicable throughout Canada, which establishes standards for all public disclosure an issuer makes of scientific and technical information concerning mineral projects materials to the issuer. Dorato Resources Inc. adheres to the NI 43-101 standards, and provides the following information related to its Peruvian projects.

The work programs at the Company's Peruvian properties have been designed and are run by EurGeol Dr. Mark D. Cruise, a qualified person as defined by National Instrument 43-101, has supervised the preparation of the scientific and technical information that forms the basis for the disclosure with respect to the results of exploration on the Company's Peruvian projects as contained on this website. Dr. Cruise is the Vice President-Business Development of Cardero Resource Corp.

All geochemical samples are secured and shipped to ALS Chemex for assay. For properties where drilling is taking place, on-site personnel at the project photograph the core from each individual borehole prior to preparing the split core, which is then sealed and shipped to ALS Chemex for assay.

ALS Chemex's quality system complies with the requirements for the International Standards ISO 9001:2000 and ISO 17025: 1999. Analytical accuracy and precision are monitored by the analysis of reagent blanks, reference material and replicate samples. Quality control is further assured by the use of international and in-house standards. Finally, representative blind duplicate samples are forwarded to ALS Chemex and an ISO compliant third party laboratory for additional quality control.
